Defining Classes Labs – Part 1

This is an individual lab. Read the attached "Defining Classes" document. Remember to refer to the "SYD366 Notes" document in "Course Notes" for Visual Paradigm guidance. Furthermore, you are encouraged to read the IBM documentation posted in the Week 2 prep folder for further review.

Your tasks:
1. Add to your class diagram the remaining classes to support the Systems Use Case Specifications in the defining classes labs.
2. Copy and paste your diagrams in to a .docx compatible file. Convert it and submit it as a PDF file alongside your .vpp (visual paradigm) file.
